Reinventing sealing technology

Automotive and multipurpose seals and gaskets

2019/2020 EDITION
Cork, an exceptional raw material

Cork is the outer bark of the cork oak tree (Quercus Suber L.), the 100% natural plant tissue covering the trunk and branches.

It consists of a honeycomb-like structure of microscopic cells filled with an air-like gas and coated mainly with suberin and lignin. One cubic centimetre of cork contains about 40 million cells.

Cork is also known as “nature’s foam” due to its alveolar cellular structure. It has a closed-cell structure making it lightweight, airtight and watertight, resistant to acids, fuels and oils, and impervious to rot.

It is sustainably harvested by specialised professionals without damaging the trunk, thus enabling the tree to grow another layer of outer bark that, in time, will be re-harvested. Over the course of the cork oak tree’s life, that lasts 200 years on average, the cork may be stripped around 17 times. This means that cork is not only a natural raw material, it is also renewable and recyclable.
When cork isn’t so visible, the Cork Inside seal guarantees that the product contains cork in its formulation, a 100% natural and recyclable material with unique technical properties.

Cork Inside formulations combine cork with other materials and are developed and rigorously tested by Amorim Cork Composites’ innovation and engineering teams. Cork Inside responds to stringent requirements and guarantees the needed performance required for the application.

At i.cork factory, our innovation hub, we achieve the perfect match between performance and sustainability. New, innovative and high performance products from the circular economy are arising.

With cork at the core, blended with other materials, that are waste from other industries (industrial symbiosis), we give materials a new life by creating new products while taking care of the planet.

Over time, our expertise in cork has enabled us to create these new and high technological formulae that blend cork with other materials - thereby leveraging cork’s attributes.
Techseal solutions for the best sealing performance

Materials & Applications

Automotive
Automotive seals and gaskets
Powertrain sealing materials.

Multipurpose Seals and Gaskets
Gasket materials for applications that include electric & electronic enclosures, natural gas & LPG, heavy duty diesel, industrial and small gasoline engines.

Main Advantages

Temperature
Wide range of thermoset polymers and blends are used ranging from SBR, NBR, ECO and VMQ to obtain specific temperature resistance.

Flange
Material's tolerance to extreme surface finishings, such as "as cast", or high out-of-flatness flanges, such as stamped steel and plastic covers.

Fastener
Fewer and lower grade fasteners allow for lower bolt torques due to material's low load to seal.

Sealing area
Stress ranges and reduced side flow allow choice of materials to customize sealing areas.

Medium
Designed to resist oils, fuels, gases and other lubricants as well as coolants.

* Typical value

**Certifications and Approvals**

1. UL157 Listed - Gaskets and Seals - requirements cover test procedures and performance criteria for the evaluation of nonmetallic gasket and seal materials for specific end products.
2. DVGW Approved - Rubber/Cork and rubber/cork synthetic fibre based gasket materials for use with gas valves, gas appliances and gas pipe work.
3. NP4464 Compliant - Cork/Rubber materials for tightness joints used in gas appliances, valves, devices and gas installation.
4. EN 30.1.1, part 6.1.1.2 Compliant - Domestic Cooking Appliances Burning Gas, Durability of Sealing Materials.
5. JIAC001 Compliant - Japanese gas appliance inspection association.
